

Enabling You to Do More with Your Next Generation Sequencing Data

Scientists worldwide have come to rely on Partek® Genomics Suite™ for data analysis & visualization of microarray & qPCR data. Now, Partek brings you Partek® Flow™, specifically designed for front-end alignment, enhanced quality

control, RNA quantification, & variant detection of next generation sequencing data. With the addition of Partek Flow to the Partek family of products, you now have a complete start-to-finish solution for all your next generation sequencing needs.

Integrates seamlessly with Partek® Genomics Suite™ to provide an economical & complete start-to-finish next generation sequencing solution

Get started right out of the box with a user-friendly interface that guides selection & alignment & organizes work into projects for intuitive navigation

Easily add users to collaborate, share protocols, & data within your institution which saves time & leverages your collective knowledge

Schedule tasks to run when resources become available & receive an e-mail notification when it is complete so you can focus your energy where it is needed most

Desktop, server, cluster, & cloud-friendly installation provide a multiuser site license option, the ability to effortlessly process large data sets, & to access data from any browser, anywhere

Allows you to process raw data from all leading next generation sequencing technologies

Automatically record your project history to enable easy auditing & tracking

Install on the platform of your choice: Windows®, Linux®, or Macintosh®

Save storage space, reduce file output size & transfer time by automatically converting to BAM files for aligned sequences & compressed project files that seamlessly transition data to Partek Genomics Suite for advanced statistics, integrated genomics, visualization, & biological interpretation

Supports all core assays allowing you to analyze data from a variety of angles
