

Overview

This is the initial version of the Vega system instrument control software.

Supported SMRT[®] Link versions

Vega instrument software v1.0 is compatible with SMRT Link v25.1.

Known issues

- Loading level estimates shown at four hours elapsed time are inflated by 10-20% (proportional, not absolute).
- There is an issue with the by-strand base calling used in the AAV application that causes severe underperformance; AAV mode should not be used with this software version.
- If the user elects to output kinetics, kinetic data is incorrectly output for the fail_reads.bam file resulting in inflation of that file's size.
